

CALCULATING THE GPA IN THE MAJOR

While a student must attain a 2.0 cumulative grade point average (GPA) for all courses in order to graduate, the student must also attain a 2.0 cumulative GPA in the major as specified by the following criteria:

1. All courses taken in the major discipline count in calculating the GPA for that major (unless specifically excluded).

2. Courses required for the major but taken outside the major discipline are not counted in the computation of the major cumulative GPA.

3. Interdisciplinary majors, defined as such upon approval, count all courses specifically listed as meeting the requirements for the major.

4. As is the case for all University courses, if a course in the major is repeated, all grades earned for that course are included in the computation of the cumulative GPA for that major.
